DISTRIBUTION STATEMENT A: Approved
for public release; distribution is unlimited.

2 June 2015

UNCLASSIFIED

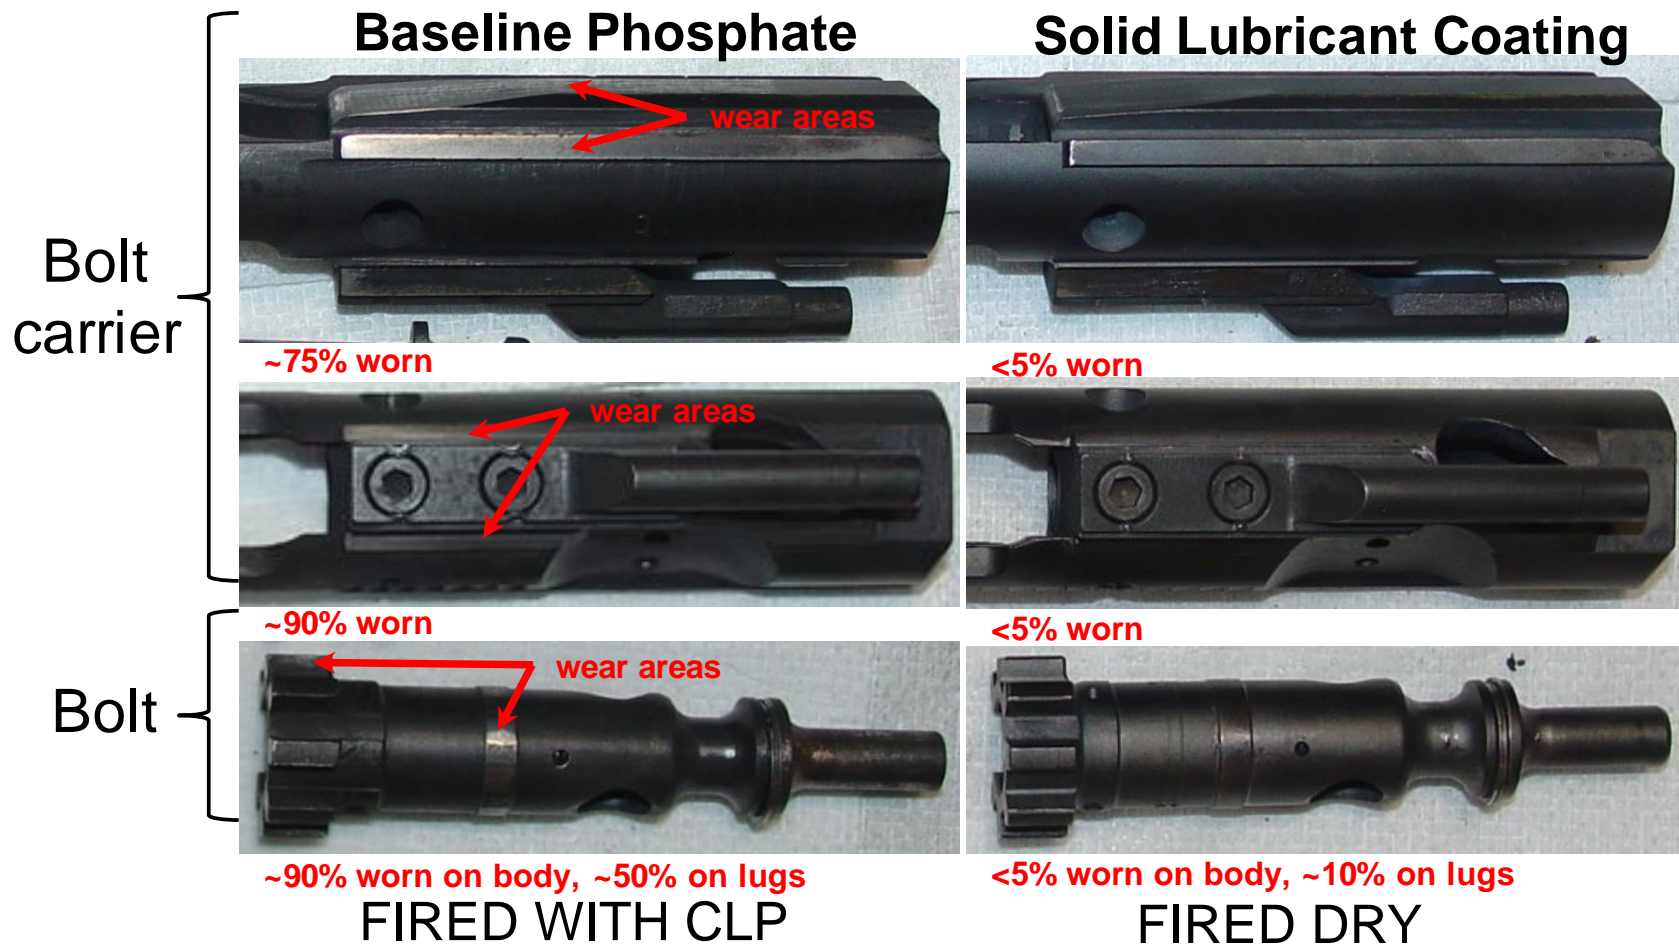

Durable Solid Lubricant (DSL)

- Problem
 - Reduce or eliminate lubrication requirement for reduction in maintenance and increased reliability for small arms
 - Ability to provide correct combination of wear resistance, optimized friction coefficient, corrosion resistance, and anti-fouling/material transport behavior in the presence of propellant residue and environmental debris
- Approach
 - Implementation of advanced surface treatment to provide Durable Solid Lubrication (DSL)
- Objectives
 - Improve reliability and maintainability of small arms with specific emphasis on operation in extreme environments
 - Reduce or eliminate the need for conventional lubricants in weapon action components

DISTRIBUTION STATEMENT A: Approved
for public release; distribution is unlimited.

Demonstrated Results

After 15,000 rounds (ambient):

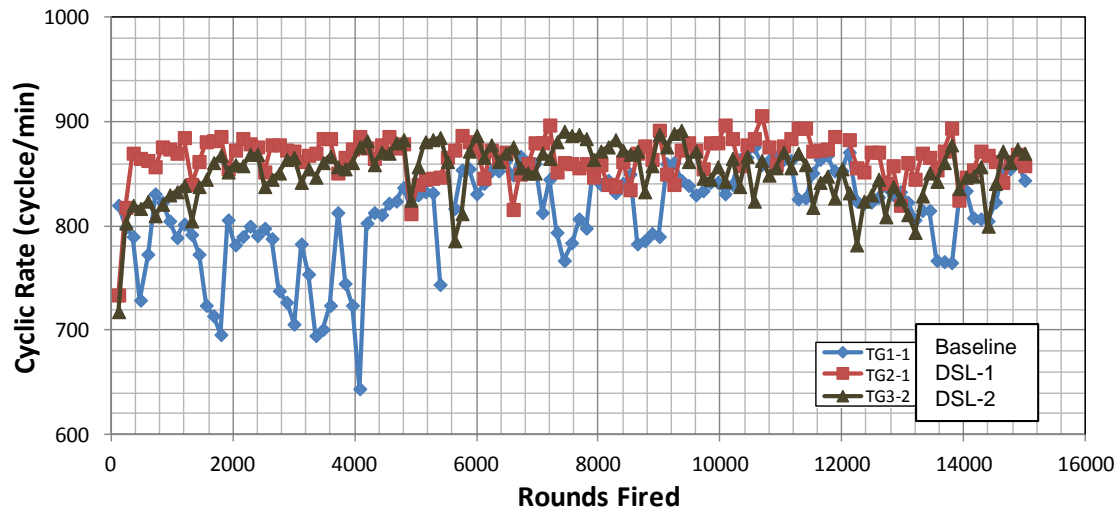

% worn = % totally exposed substrate

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

UNCLASSIFIED

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

Demonstrated Results

The DSL weapon systems performed as well or better than the CLP lubricated baseline under ambient testing conditions

- Increased weapon reliability
- Decreased wear on critical sliding surfaces
- More consistent cyclic rates
- Easy maintenance/cleaning with no CLP

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

Detailed Description

- Technology Details

- 1) A durable solid lubricant deposited on the surface of substrate material, characterized by specific properties based on
 - a) Hardness
 - b) Thickness
 - c) Coefficient of Friction
 - d) Corrosion Resistance
- 2) A durable solid lubricant eliminating the need for conventional liquid lubricants
- 3) A durable solid lubricant providing:
 - a) low friction; elimination of jamming related failures of sliding components resulting in increase component reliability
 - b) increased component wear life; highly resistant to wear and eliminating hydrogen embrittlement factors from standard phosphate treatments resulting in longer lasting parts
 - c) corrosion protection in all relevant environments
 - d) improved maintainability; promotes ease of cleaning and reduction in active maintenance

DISTRIBUTION STATEMENT A: Approved
for public release; distribution is unlimited.

Background

Self-Lubricating Nanocomposites

Nanocomposite and multilayer coatings with SOLID based lubrication:

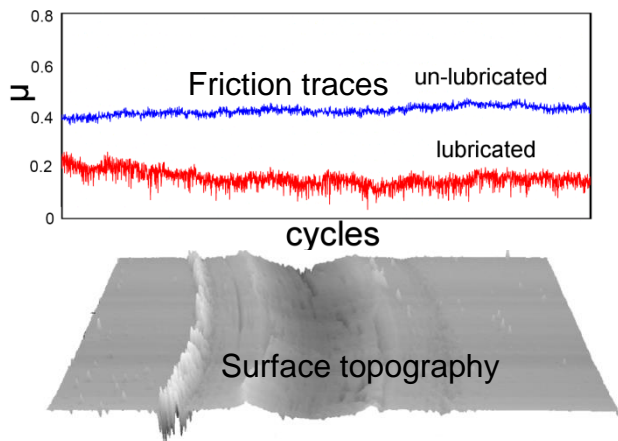

Applicable to:

- Weapon action components
- Vehicle action components
- Manufacturing/Machining operations
- Advanced oil-free turbomachinery

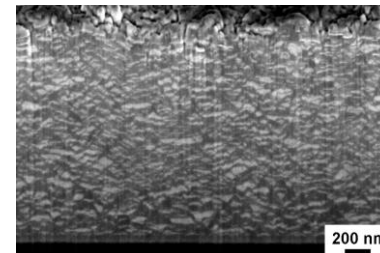

Allows:

- Elimination of conventional liquid lubricants
- Increased reliability of parts, decreased logistical burden

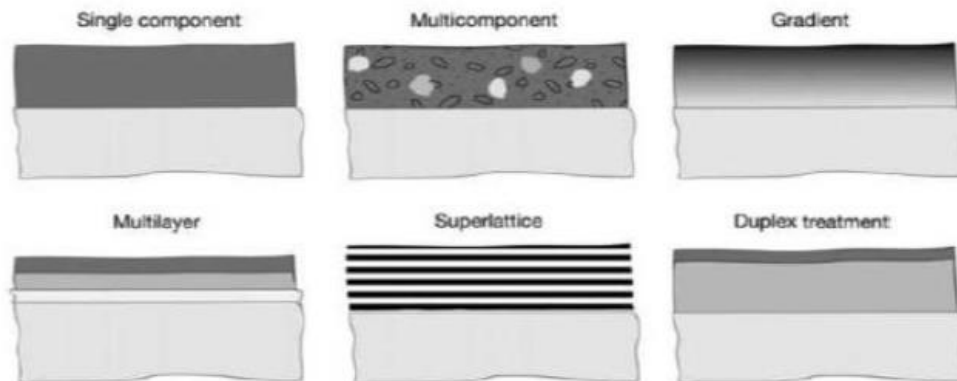

Bench scale tribological testing:

- Up to 80% reduction in friction
- Up to 15x reduction in wear

Cross-section of NC coating. Nanoscale solid lubricant (light phase) encapsulated in hard matrix (dark phase).

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

Technical Approach

Three Stage Approach: Innovative and Tailored Test Protocols Developed

1) Stage 1

- Broad screening tests to include rapid Ball-on-three-disk (BOTD) tribological testing and coatings characterization
- Down-select promising candidates

27 different material combinations eval'd

2) Stage 2

- Targeted bench-scale tribological testing
 - Testing to accurately simulate weapon action
- Down-select promising candidates

6 different material combinations eval'd

3) Stage 3

- Live Fire Testing

4 different material combinations eval'd

DISTRIBUTION STATEMENT A: Approved
for public release; distribution is unlimited.

Stage 1 Characterization

Porosity/cracking/defects

Nanocomposite structure

(a) as-deposited $T_s = 500\text{ }^{\circ}\text{C}$

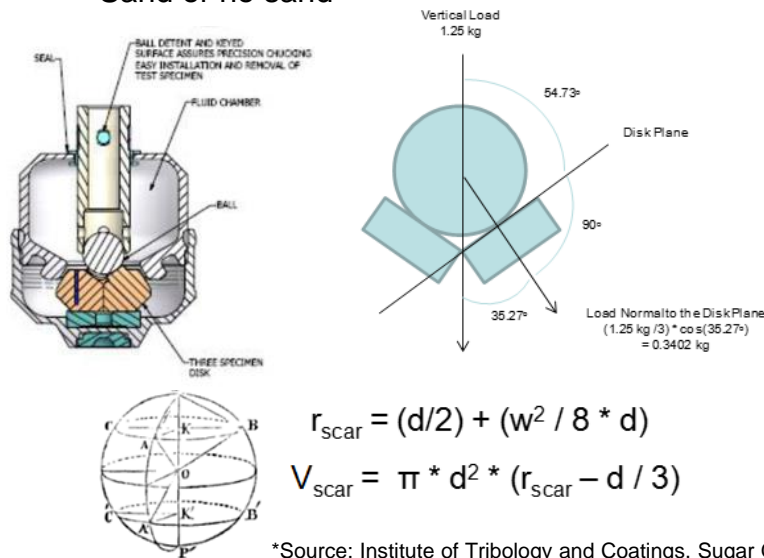

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

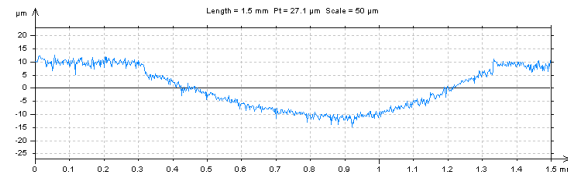

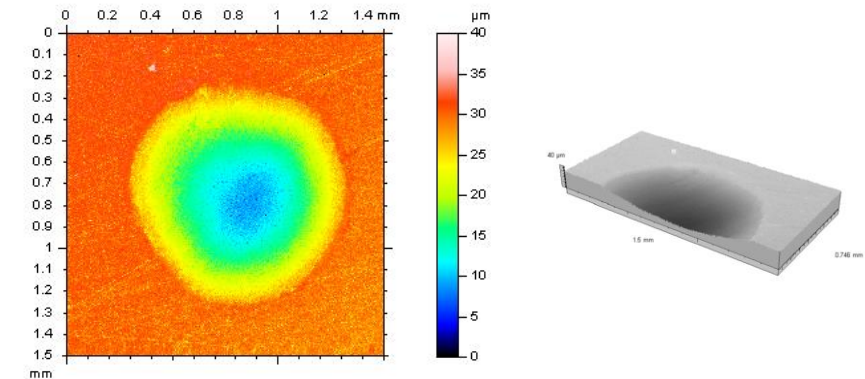

Stage 1 Characterization

Stage 1:

- Broad and rapid screening of fundamental properties using ball-on-three disk (BOTD) tribological testing apparatus developed for this program
 - 27 different material combinations evaluated**
- Broad spectrum of environments tested for each
 - Dry or with CLP (lubricant)
 - Temperature - 25 versus 250 °C
 - Sand or no sand

Parameters (Rotational Speed, Test Duration, Cycles, Load, Contact Pressure, Environment, Temperature)

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

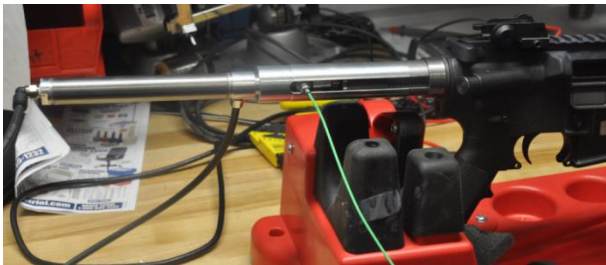

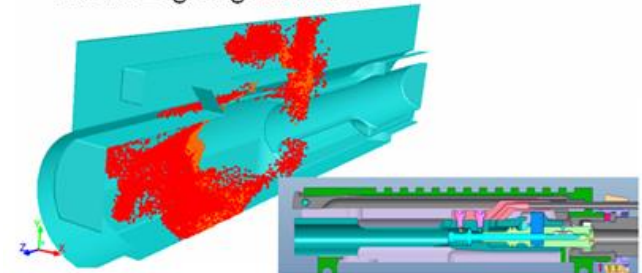

Stage 2 Characterization

Stage 2:

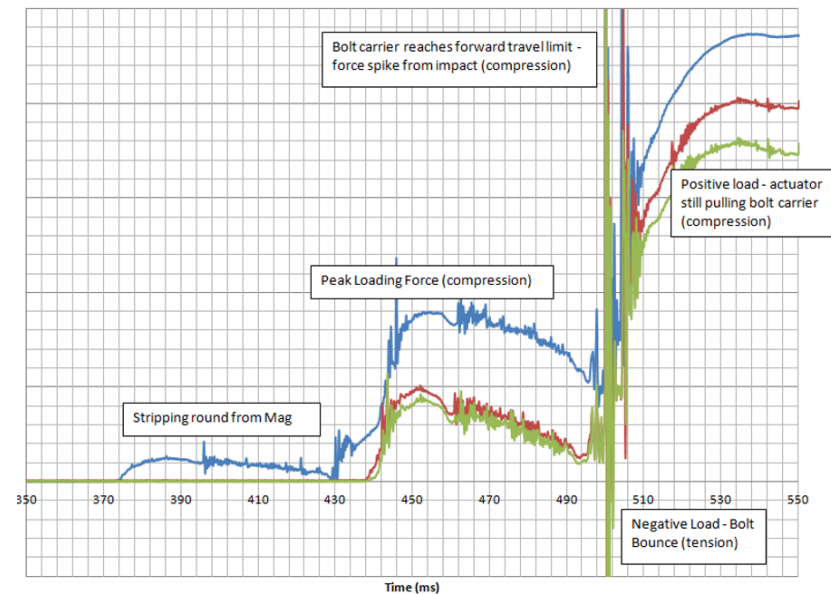

- CFD Modeling and Simulation, Peak force analysis, and Targeted bench-scale evaluation using Slide-Rail-Simulator for quantitative evaluation of weapon interfaces.

- 6 different material combinations evaluated

Internal particle flow, Standard
Fluent Lagrangian Model

Developed/Fabricated bench scale test hardware to measure peak loading/extracting forces.

Peak loading force comparisons

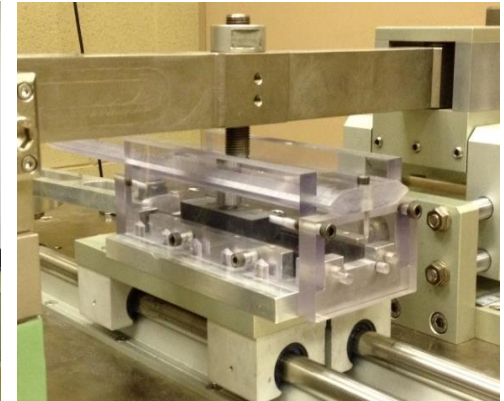

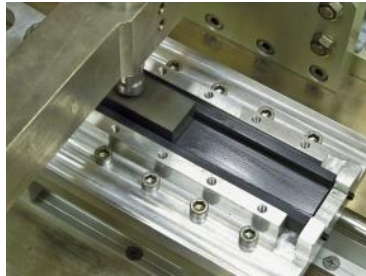

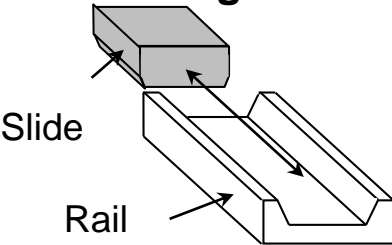

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

UNCLASSIFIED

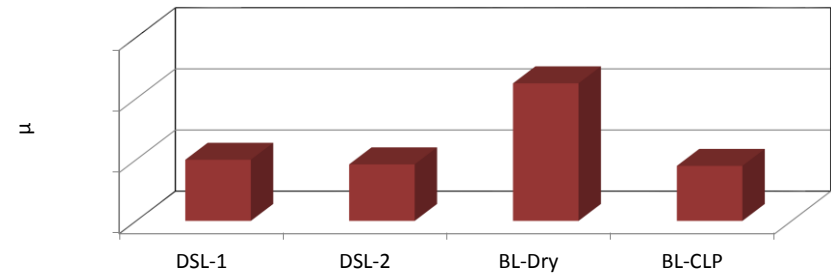

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

Stage 2 Characterization

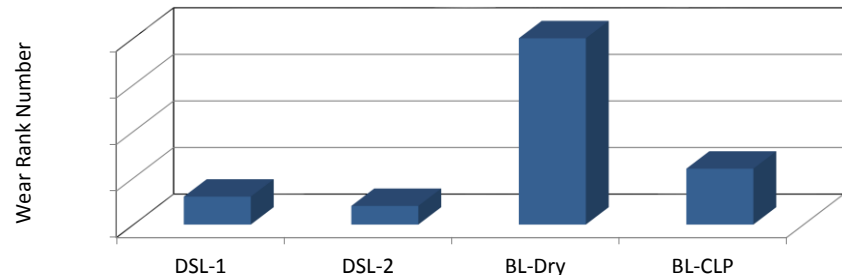

Stage 2:

Coefficient of friction

Wear number (lower is better)

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

UNCLASSIFIED

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

Stage 3 Live Fire Testing

- **Stage 3:** Live Fire Testing DSL fired dry versus baseline with CLP

Test Operating Procedures	Reference TOP 3-2-045	Demonstrated
Ambient	Section 4.3	DSL Improved Performance
Hot (160F)	Section 4.5.1	DSL Improved Performance
Cold (-60F)	Section 4.5.1	DSL Equivalent Performance
Sand/Dust	Section 4.5.4	DSL Equivalent Performance
Salt/Fog	Section 4.5.7	DSL No chemical reaction / no corrosive buildup
Unlubricated	Section 4.22	DSL >4X increase in rounds fired w/out stoppages

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

Path Forward

Future Testing:

- Limited Military Utility Assessments (LMUA)
 - Cold weather testing at Ft. Richardson, AK
 - Ft Benning, MCoE
- ATC Confirmatory Testing (FY15)
 - Technology Transition Agreement (TTA) signed with PMSW
 - Completion of ATC testing will achieve TRL 6

DISTRIBUTION STATEMENT A: Approved
for public release; distribution is unlimited.

UNCLASSIFIED

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

13

Summary

- **Warfighter Payoff**
 - Increased component wear life
 - More wear resistant and long lasting parts
 - Increased reliability
 - Reduce/eliminate jamming related failures in weapon action components
 - Improved maintainability
 - Promote ease of cleaning and reduction in Active Maintenance
- **Development of innovative lab scale test protocols**
 - Developed a standardized process to support future surface treatment characterizations
- **Additional applications for Armament System action components**
 - Future development work supported through Joint Service Small Arms Program (JSSAP) Office

DISTRIBUTION STATEMENT A: Approved
for public release; distribution is unlimited.
